

Musa Qureshi

Bhopal, India | +91 6263473208 | musa.qureshi@bansalinstitutes.ac.in | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [X](#)

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, JS/TS

AI Engineering: LangChain, LangGraph, Agno, RAG, Multi-Agent Systems, Vector Database

Software Development: FastAPI, REST APIs, React, Next.js, PostgreSQL, Redis, System Design, Microservices

Machine Learning: ML Algorithms, Scikit-learn, TensorFlow, PyTorch, Transformer

Infra & Tools: CI/CD, Docker, Linux, Gemini API/SDK, GCP, Terraform, OpenTelemetry, Playwright

PROJECTS

GOVERNANCE AI | [Live](#)

May '26 – Present

Tech: Python, FastAPI, Next.js, TypeScript, PostgreSQL, Redis, Docker, OpenTelemetry, GCP

- Built an enterprise **AI governance platform** that acts as a trust layer for autonomous AI systems, enabling policy enforcement, audit logging, and real-time **observability**.
- Architected an **AI Gateway** with **10+** modular governance services, implementing authentication, organization management, risk evaluation, and scalable **microservice-based** workflows.
- Developed a production-ready platform with a **real-time monitoring dashboard**, **Dockerized** services, and comprehensive **developer documentation** while building Python/TypeScript **SDKs and public APIs**.

TRADE GLANCE | [GitHub](#) | [Live](#)

Feb '26

Tech: Python, Streamlit, Prophet, FinBERT, Plotly, Scikit-learn, Finnhub & Y-Finance API, LangChain

- Built an AI-driven **FinTech market intelligence** platform combining time-series forecasting, technical analysis, sentiment modeling, and agentic research using **Prophet** (7–90 day horizons) and **FinBERT**.
- Improved forecast **accuracy by ~18%** through feature engineering and **technical indicators** (SMA, RSI, MACD), and engineered an **agentic AI research assistant** supporting tool calling, live search, and real-time **financial** intelligence.

CARE GRID | [GitHub](#) | [Live](#) | EY Techathon 6.0 Pre-Finalist

Dec'25 – Jan'26

Tech: Python, LangGraph, FastAPI, React, PostgreSQL, Google Maps API, NPI Registry, Vercel

- Designed a **LangGraph-based multi-agent AI platform** to automate provider validation, enrichment, and risk assessment for healthcare payers, reducing manual **verification by ~60%** and improved audit **readiness by ~40%** using scalable agent-driven workflows.
- Implemented **agent orchestration** integrating Google Maps API and NPI Registry, **achieving 90%+** provider data accuracy through automated verification and confidence scoring.

WORK EXPERIENCE

SureProED | ML Engineer Intern

Remote | Jul '25 – Feb '26

- Engineered Python pipelines for preprocessing, feature engineering, and exploratory analysis across **25+** real-world datasets, and designed a **Neural Machine Translation (NMT)** system from scratch using a seq-to-seq architecture.
- Developed **5+** ML, Deep Learning, and Computer Vision solutions, implementing neural network architectures, model optimization, and hyperparameter tuning using Scikit-learn, TensorFlow, and PyTorch.

Outlier & BitPool | AI Consultant (Part-time)

Dec'25 – Present

- Evaluated and validated LLM outputs for reasoning, factual accuracy, safety, and response quality across diverse AI tasks.
- Contributed to model alignment through structured annotation, preference evaluation, and quality assurance.

ACHIEVEMENTS

• **Authoring a research paper on Agentic Case Intelligence.**

May'26 – Present

• **Actively Publishing technical articles on AI security and enterprise AI systems on Medium.**

• **Codeforces Specialist (~1500) & Solved 200+ LeetCode problems.**

• **Oracle Cloud Infrastructure Generative AI Professional Certification (92%).**

Sep '25

• **Machine Learning Specialization – DeepLearning.AI & Stanford University.**

Jan'26 – May'26

EDUCATION

BANSAL GROUP OF INSTITUTIONS

Bachelor of Technology, Major in Computer Science; CGPA: 7.91/10;

Bhopal, India

Expected: June 2027
